Saki-Hikari, sinking food for Fancy Goldfish!

Ranchu, in Japan they call it "the King of Goldfish" but the Oranda, and Ryukin etc. also belong to the so-called Fancy Goldfish species. Especially in China and Japan, these special goldfish are very popular. These precious fish naturally deserve the best food and that is Saki-Hikari Fancy Goldfish.

40% less waste due to the Hikari-Germ™ probiotic bacteria in Saki-Hikari!

Everyone knows the health-promoting effects of lactic acid bacteria (Lactobaccillus) from the famous Japanese yoghurt drink, among others. Hikari has been applying the benefits of probiotic bacteria in Saki-Hikari fish food for many years. The Hikari-Germ™ bacteria speed up food breakdown in the digestive tract.

Subsequently, the bacteria ensure optimal food absorption and digestion in the intestines. This results in **40% less waste** (faeces) and thus better water quality. Moreover, Hikari-Germ™ ensures better absorption of vitamins, minerals and proteins. This ensures healthy growth and beautiful colours. Saki Hikari Fancy Goldfish is the first product with live probiotic bacteria.

Koi- and pond fish.

Differences Between Hikari Staple and Hikari Friend:

1. Ingredients Quality:

Hikari Staple is made using carefully selected ingredients. While Hikari Friend contains similar basic ingredients, Staple adheres to much stricter quality standards.

2. Crude Protein Value:

Hikari Staple guarantees a crude protein content of 37%, compared to 28% in Hikari Friend. In addition, Staple is enriched with more vitamins and minerals to support optimal nutritional balance and growth development.

3. Specific Ingredients and objectives:

Staple is superior to Friend in terms of basic performance as a food, such as growth and nutritional balance. Friend contains Spirulina to help prevent color fading, but it is less efficient in promoting growth and feed conversion.

Hikari Friend offers the most economical feed, produced in Japan, and is unrivaled in price-quality ratio. Hikari Staple provides higher nutritional value and better ingredients. This way, there is Hikari feed for every budget: minced meat one day, steak the next.

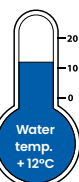

Hikari Friend™.

Hikari Friend is produced in Japan and offers a great quality, price ratio. Hikari Friend has a balanced composition of nutritious ingredients and contains stabilised vitamin C, for healthy fish growth and development.

Daily feed for Koi and pond fish, the floating pellets soften quickly and are easily digestible and do not pollute pond water.

Hikari Friend is much more nutritious than pond sticks and more economical per gram! Pond sticks are lightweight and low in nutrients, hardly contributing to the growth and development of pond fish.

Hikari Staple™.

Hikari Staple is the best base food you can buy for your money. It offers the optimal combination of quality and price, making it the best choice for the cost-conscious consumer.

Staple has been the best everyday base food for over 50 years, up to 4 times a day, and is developed in the renowned Hikari laboratories in Japan. There is no food that offers more quality for its price! Hikari Staple contains high-quality ingredients carefully balanced. This results in a feed with a relatively high protein content of 37%, optimally supporting koi growth.

In addition, Hikari Staple contains a wide range of vitamins and minerals in exactly the right amounts. Feeding your fish with Hikari Staple ensures excellent condition and health.

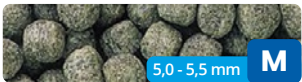

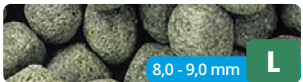

The quality of Hikari Staple is guaranteed by production in Hikari's Japanese factories. Rightly, this feed carries the quality mark 'Made in Japan'! Hikari Staple is available in 3 pellet sizes, suitable for fish from 6 cm up to 100 cm. Whether you have few or many fish, there is always a packaging size that fits your needs: from 500 g up to 2 or 5 kg and even 10 kg for the largest ponds.

Hikari Staple is therefore truly the ideal base food for everyone. Not only for koi, but also for other pond fish, Hikari Staple is a perfect choice!

Hikari Staple has been the best staple food for Koi and pond fish for more than 50 years. The balanced ingredients ensure excellent growth and immune system support. Hikari Staple has been a proven quality for many years.

Daily staple food for Koi and other pond fish, only Hikari is produced and packed in Japan for guaranteed top quality.

Premium ingredients ensure healthy growth and excellent condition and health.

Hikari Gold®.

Just as Hikari Staple is the best base food for daily use, Hikari Gold is the best color-enhancing food for koi. The principles behind Hikari Gold are the same: we provide the best color food that offers the most quality for the money.

The Hikari laboratory in Japan is continuously working to improve all feed types. Hikari scientists have enriched Hikari Gold with extra spirulina and krill, enhancing not only the red (Hiban) but also the white (Shiroji) to excellent quality. This strengthens the contrast between the colors, making your koi more beautiful than ever!

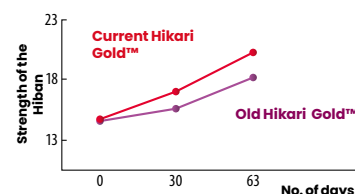

For cost-conscious consumers who want to enjoy their koi to the fullest, the combination of Hikari Staple and Hikari Gold is perfect. This combines the excellent growth and health of Staple with the optimal color development of Gold. A winning combo!

Hikari Gold® is a scientifically developed daily feed for Koi and other pond fish. The renewed composition with more spirulina and the addition of krill ensures even more active colour enhancement of the Hiban (red colour).

Daily staple food for Koi and other pond fish, only Hikari is produced and packed in Japan for guaranteed top quality.

Special Food for Koi.

Hikari Spirulina.

Hikari Spirulina really makes Koi's colours pop. This complementary feed provides naturally rich colouration without affecting the whites. For show-quality Koi.

Special colour feed for use at higher water temperatures! Only Hikari is produced and packaged in Japan for guaranteed top quality.

Contains pure cultured spirulina, carotenoids and other nutrients, for exceptional colour and beauty.

Contents 500 g floating mini pellet, suitable for Koi from 8 to 30 cm

S.R.P.
€19,99

Silkworm Selects.

Hikari Silkworm Selects contains all the goodness of silkworms without the health risks of dried silkworms. The formula uses premium quality fresh silkworm pupae, its unique production prevents spoilage, oxidation of fats. Provides rapid body weight gain.

Supplementary feed for the summer months, rich in lipids and proteins, spoil your Koi with silkworms!

Silkworms have high natural nutritional value, but spoil at lightning speed due to oxidation of the fats, which is why dried silkworms are dangerous for Koi. Silkworm Selects is the safe alternative!

Contents 500 grams floating medium pellet, suitable for pond fish and Koi of 15 cm and larger.

S.R.P.
€18,29

Hikari Hi-Growth.

Hikari Hi-Growth is a powerful supplementary growth feed for the summer months, high-quality proteins and minerals ensure rapid growth to champion size in a short time.

Powerful supplementary growth feed for the summer months, provides rapid weight gain and body volume!

Hikari Hi-Growth will turn your Koi into Jumbo Koi!

Contents 2 kg vacuum-packed floating elongated XL pellet, the pellet resembles a beetle. Suitable for Koi of 30 cm and larger.

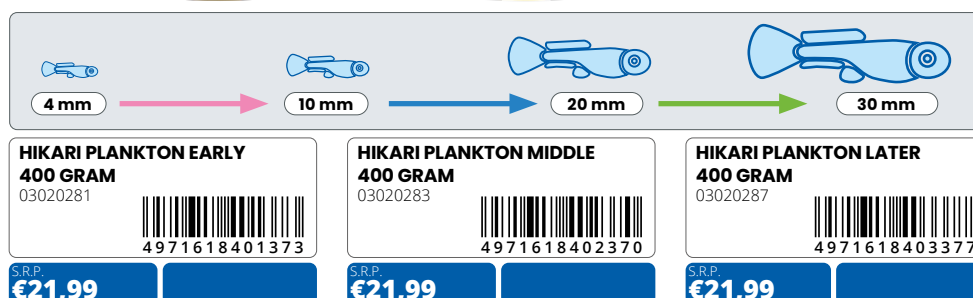

S.R.P.
€52,49

Hikari Plankton.

Hikari Plankton for baby Koi is available in three pellet sizes, ensuring that the young hatching gets the appropriate pellet at each stage of life. Plankton Early (fish length 4-10 mm), Plankton Middle (fish length 10-20 mm) and Plankton Late (fish length 20-30 mm). Each pellet has a thin coating so that the pellet does not dissolve in the water and the fish can also absorb all the nutrients packed in the pellet.

Special food for hatching Koi, for successful breeding. The pellets slowly expand in water, making them easy to eat.

Float food, easy to eat and does not affect water quality. Made from the highest quality fishmeal, a superior protein source, contains all necessary nutrients such as methionine.

Hikari® Wheat-Germ.

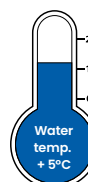

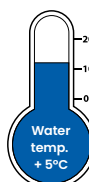

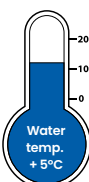

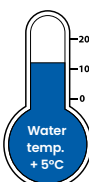

Did you know that Hikari® Wheat-Germ is not only feed for low water temperatures but is excellent for feeding all year round! Why? Koi is an omnivorous fish species with a strong phytophagous diet. They are able to digest and absorb plant material very well. Below we explain what Wheat-Germ is and why Hikari Wheat-Germ is unique!

Hikari® Wheat-Germ.

Hikari Wheat-Germ is an easily digestible feed for all seasons. The use of wheat germ as a main ingredient ensures a high concentration of vitamins B and E. Hikari Wheat Germ contains all 9 essential amino acids and fatty acids important for fish health.

Daily plant-based food, easily digestible year-round! only Hikari is produced and packed in Japan for guaranteed top quality.

Only Hikari contains Wheat Germ as its main ingredient, making it unique! This feed is ideally suited at lower water temperatures but also for mixing during the other seasons to promote digestion, skin quality and colours.

What is Wheat-Germ?

Wheat-Germ is processed into the following substances:

1. **Wheat-Germ Protein (2%):** The original part of the malt and young root. Rich in proteins and lipids, this vegetable raw material is one of the best nutrients for Nishikigoi.
2. **Proteins (83%)** This is wheat flour for human consumption
3. **Bran (15%)** Not for human consumption, mainly used as a food ingredient.

Only one spoonful of Wheat-Germ can be obtained from about 10,000 wheat grains!

High in Vitamin E.

How Vitamin E works:

1. Strong antioxidant power. Helps with stress and to slow down cell ageing and maintain cell health.
2. Provides better blood flow and metabolism, in humans it improves skin moisture retention and elasticity. In Nishikigoi, this helps against yellowing and provides a healthy sheen.

Why Hikari® Wheat-Germ is unique:

Hikari® is often copied, however the ingredients are not of the same quality. Here you can see a comparison of Hikari® Wheat-Germ with 2 similar brands that claim to contain Wheat-Germ:

Ingredient declaration of Hikari® Wheat-Germ Formula:

Derivatives of vegetable origin (wheat germ meal 40%), fish and fish derivatives, bakery products, cereals, vegetable protein extracts, yeasts, algae, vegetables, minerals.

Competitor A:

- Wheat flour
- Fish meal
- Squid meal
- Soya flour
- Corn gluten flour
- Rice bran
- Wheat-germ meal
- Fish oil

Competitor B:

- White fishmeal
- Krill
- Wheat-Germmeal
- Brewers dried yeast
- Soya flour
- Wheat-Germ flour

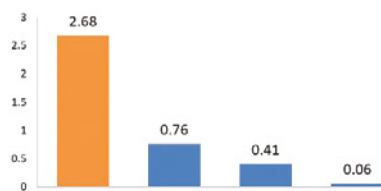

Only Hikari® contains Wheat-Germ as its main ingredient!

Rich in vitamin B complex:

Wheat-Germ ensures proper digestion and stimulates reproduction! In addition, Wheat-Germ contains all 9 essential amino acids that cannot be synthesised in the body of fish.

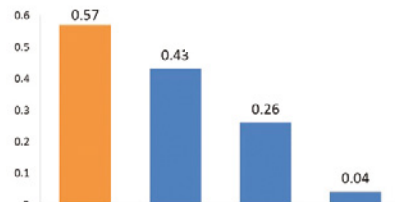

Vitamin B1 (mg/100):

Burning carbohydrates

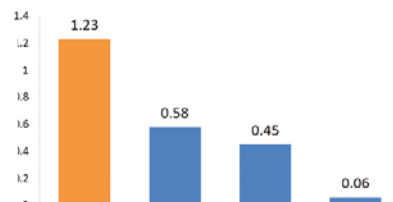

Vitamin B2 (mg/100):

Burning of lipids

Vitamin B6 (mg/100):

Degradation and resynthesis of amino acids

Rich in amino acids and fatty acids.

Wheat-Germ contain all 9 essential amino acids that cannot be produced in the body of fish; *Isoleucine, leucine, lysine, methionine, phenylalanine, threonine, tryptophan, valine, histidine*. Wheat-Germ contain 2 fatty acids which are constituents of cell membranes; *Linoleic acid and α-linolenic acid*.

Hikari® Wheat-Germ feeding advice:

Wheat-Germ is used year-round by Japanese breeders because:

- A combination of growth, colour enhancing and Wheat-Germ feed is very well eaten by Koi.
- The combination of Wheat-Germ with growth/colour feed promotes the Koi's body development.

We also recommend Wheat-Germ in quarantine systems, after transporting Koi and after drug treatment.

Hikari® Wheat-Germ in spring:

Winter fasting thins the Koi's intestinal tract. When decomposing Koi that have not been fed for a long time, the intestinal wall is very thin and can tear with the slightest force. As a result, the digestive capacity of Koi after winter is low, therefore feed easily digestible Hikari® Wheat-Germ!

Hikari® Wheat-Germ at low water temperatures:

At low water temperatures Koi's bowel movements are weak, it is important that no food is left in the gut. Wheat-Germ is rich in dietary fibre. It absorbs water and swells in the intestines, here intestinal movements are stimulated. This is why Hikari® Wheat-Germ is suitable at low water temperatures.

We recommend feeding with a smaller pellet size for optimal digestion!

Medaka (*Japanese rice fish*).

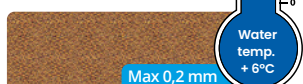

Medaka, or Japanese Rice Fish, are small, colorful fish that brighten any aquarium or pond. They thrive in various environments, flourishing in low-oxygen conditions and surviving without aeration, even in temperatures above 30°C. Their hardiness lets them endure cold winters and icy outdoor conditions. Medaka are perfect for beginners, being easy to care for and quick to breed. With proper care, a new generation can appear in just three months, making breeding simple and rewarding.

Hikari Medaka is specially formulated for Japanese rice fish (*Oryzias latipes*) and available in 3 types, **Baby** for juvenile spawn, **Next** for healthy growth of Medaka and **Breed** for proper reproduction. Floating food is recommended for Medaka, they normally swim close to the water surface and accept a floating grain very well. The granules spread quickly over the surface of the water so that any fish can benefit from it.

Feed twice daily as much as the fish eat, remove leftover food.

Saki-Hikari®.

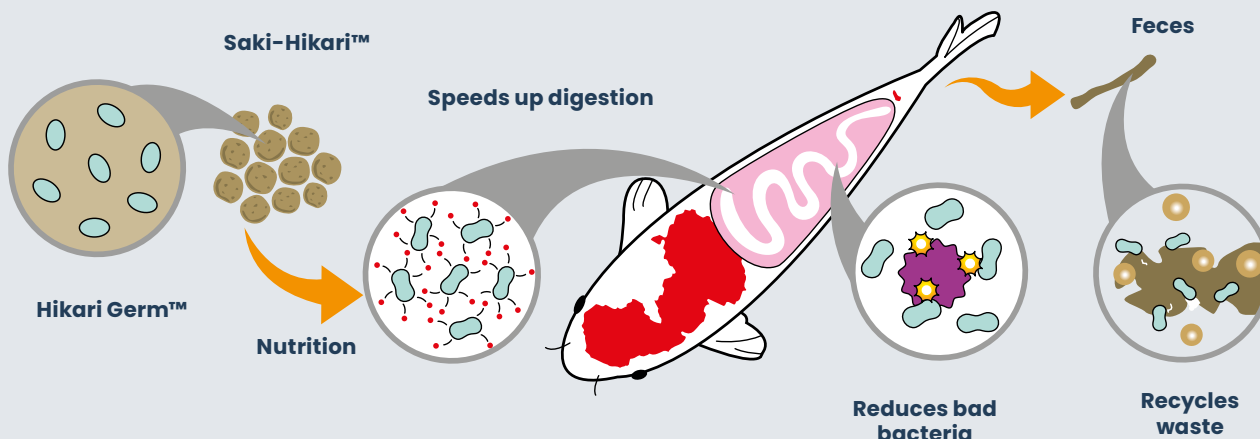

The secret of Saki-Hikari®:

The secret of Saki-Hikari® is **Hikari Germ™**. These **live bacteria** (*Bacillus Subtilis*) are added to Saki-Hikari and ensure optimal intestinal function. The result is exceptionally good digestion, rapid and consistent growth, reduced water pollution and dirt build-up. The Hikari Germ bacteria are also known as Probiotics. The beneficial effects of these bacteria are not only known to breeders, these beneficial bacteria are also used in products for human consumption, such as yoghurt and Yakult®.

Saki-Hikari® is most effective with continued daily use, the benefits of Hikari Germ diminish on interruption and when mixed with other feeds.

The action of the Hikari Germ™ in Saki-Hikari®:

First, the Hikari Germ bacteria speed up food breakdown in the digestive tract. Next, the bacteria ensure optimal digestion and food absorption in the intestines. Because the Hikari Germ bacteria settle in the intestines, pathogenic bacteria are fought, stress is prevented and the immune system is significantly strengthened. Finally, Hikari Germ reduces the amount of excrement and makes it powdery. This allows the faeces to be filtered better, less sludge and dirt remains, improving water quality.

Saki-Hikari Color Enhancing.

Saki-Hikari® Color guarantees strong colour enhancement, the red colours are promoted without affecting the white colour. Saki-Hikari® Color contains the best quality pure cultivated spirulina with a high concentration of zeaxanthin (a type of carotene), its excellent digestibility ensures exceptional growth. Effective use of the right nutrients provides unparalleled feeding efficiency, allowing you to feed less with better results!

The most powerful colour feed for Koi available, Saki-Hikari® was developed for Koi breeders in Japan and contains Probiotics.

Saki-Hikari Multi Season.

Saki-Hikari® Multi Season contains a combination of vegetable ingredients and Saki-Germ bacteria, this combination ensures that Saki-Hikari Multi Season is highly digestible. Even at the lowest water temperatures and a reduced appetite, weight loss of Koi is prevented and the energy supply is maintained.

4 seasons premium food for Koi, the unique ingredients in Multi Season makes this food suitable for all water temperatures. Saki-Hikari® was developed for Koi breeders in Japan and contains Probiotics.

Saki-Hikari® nutrition plan for champions.

Saki-Hikari® Deep Red and Saki-Hikari® Pure White are part of the feeding plan for champions. Start 6 months before a Koi show with the Hikari Show feeding plan for optimal results. View the online Hikari feeding brochure at www.aquadistri.com for information about this feeding plan.

Saki-Hikari® Deep Red™.

Enhances the depth & volume of Hiban.

Saki-Hikari® Pure White™.

For a snow-white Shiroji finish.

6 Months before the show:

Feed only with Saki-Hikari Balance, Growth, Colour Enhancing and/or Multi Season.

4 Months before the show:

Feed only a mix of Saki-Hikari® Deep Red™ with Balance and/or Growth.

2 Months before show:

Feed only a mix of Saki-Hikari Deep with Colour Enhancing.

2-4 weeks before the show:

Feed only and only Saki-Hikari® Pure White™.

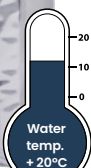

Contents 5KG floating medium pellet, suitable for Koi of 15 cm and larger

Saki-Hikari® Deep Red™.

Saki-Hikari® Deep Red provides a unique deep red pattern colouration (Hiban). Deep Red has an extreme colour enhancing effect and it is intended as a supplementary feed for maximum colour enhancement. Contains a precise amount of selected pure cultured spirulina to develop deeper colours faster, while reducing the risk of white discolouration.

Supplementary feed with an extreme colour enhancing effect, for optimal results mix 5% Deep Red with other Saki-Hikari® feed, at a water temperature above 2°C

5,0 - 5,5 mm

Saki-Hikari® Pure White™.

Saki-Hikari® Pure White ensures snow-white skin. Pure White contains an extract of Japanese apricot, this contains natural Apricot-Polyphenol and citric acid which ensures efficient metabolism, important for the development of Shiroji. Pure White also contains the antioxidants of ground sesame seeds, this provides a beautiful silky sheen.

Daily food that ensures snow-white skin, for optimal results this food should not be used in combination with other foods. Highly digestible, can be fed at water temperatures as low as 12°C.

Saki-Hikari® R.

The revolutionary Saki-Hikari® R feed contains R-extract, beneficial bacteria from fermented yeast species. The R-extract enhances the action of the Hikari Germ and protects your Koi from pathogens. It promotes overall health, resilience and also slows down the ageing process. Research with Osaka University, shows that Koi fed with the R-extract have a 90% higher chance of recovering from hole sickness.

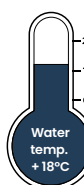

Use Saki-Hikari® R as a maintenance food in case of problems or illness of your Koi, but also when the condition of the Koi is not stable after moving Koi, placing new Koi, participation in Koi shows and other events that cause stress! Saki-Hikari® R also improves the condition of pond water.

Saki-Hikari® R protects your Koi against pathogens. For proper function, at least 5% of the feed should be Saki-Hikari® R! Mix Hikari® R only with other Saki-Hikari® feed.

Chance of survival (%)

Saki-Hikari® R is not a medicine, but it strengthens resistance to disease and ensures faster recovery.

Suitable for Koi of 15 cm and larger
